

#3776 CENTURY CHARTRES BLUE

The Chartre cathedral is the world heritage in France.

It is said that stained glass in this cathedral are the most beautiful in the world and these glass still remain so that very rare.

A technology of glass proceed rapidly and getting brighter and brighter, on the other hand, a deep colors in the Chartre Cathedral is not many and many perople says it is impossible to produce this kind of color now. Especially, a beauty of it's blue is uncomparable, hunce a proper noun "the Chartres Blue" has been named.

We pay respect to this Chartres Blue and challenge to reproduce today.

The innovative cap contains a unique "Slip & Seal" mechanism that prevents ink from drying out in the pen. Meanwhile, a newly redesigned nib and feed regulate the ink flow. Founded in 1919, Platinum Pens is now nearing a full century of achievement. The #3776 "Century" celebrates this approaching anniversary and continues Platinum Pens' tradition of technological innovation. With Platinum Pens, the pleasure of writing and the use of fine writing instruments will always be evolving.

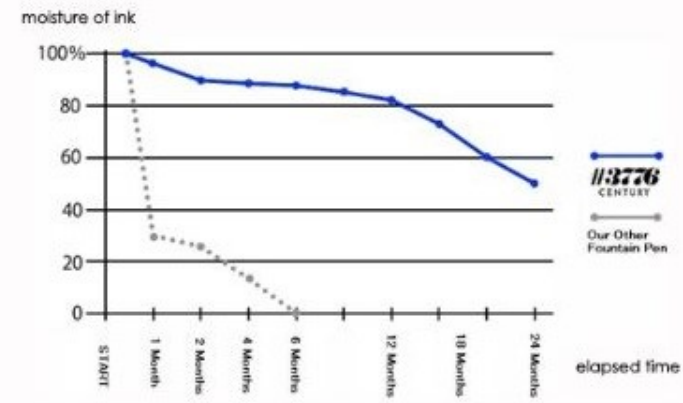

The #3776 "Century" Fountain Pen. What qualities make for the ideal contemporary fountain pen? Sleek design, comfortable writing balance, smooth flow, and fast-drying ink... At the request of customers, we at Platinum Pen have gone back to the basics to address these issues. Every part and mechanism has been carefully studied and re-engineered. The result is the #3776 "Century," designed on the base model of the popular #3776 series pens.

◆ SLIP & SEAL MECHANISM

It has normally been thought difficult to make an airtight pen with a screw-type cap. If not sealed tightly, the following problems can result:

1. Ink drying out due to moisture evaporation.
2. Problems with dried ink if the pen is not used for three to six months.
3. It can be necessary to clean the pen using our [Ink Cleaner Kit](#) or even to repair or replace the nib itself if the damage due to dried ink is too severe.

At the request of customers, we at Platinum Pen Company have gone back to the basics to deal with this problem. This is the first fountain pen which has our unique "Slip & Seal" structure in a pen with a screw-type cap. Thanks to this innovation, currently being patented, it is possible to have a screw-type cap with complete airtightness.

Changes of the amount of ink by time with a cap.
